

4th ACM Conference on Information-Centric Networking (ICN 2017)

Grafting opportunistic communications onto ICN:
the UMOBILE project

The UMOBILE Lab

Angela D'Angelo

Gianmichele Russi

Semptember 26th, 2017

ACM ICN 2017, Berlin

YES, but ...

Let's start from the beginning: the idea was...

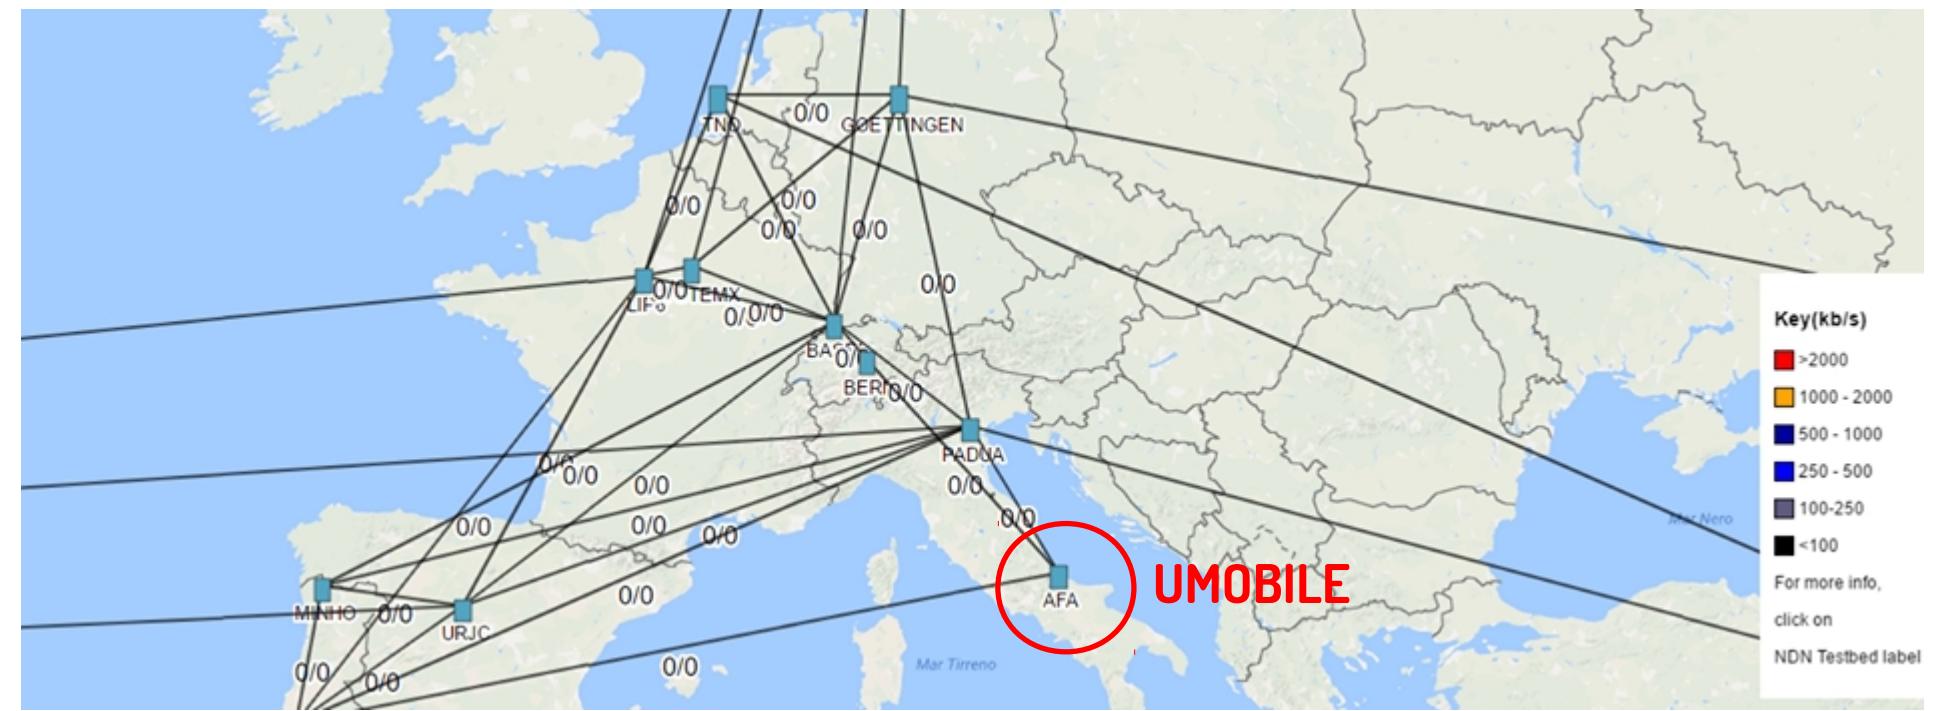

The UMOBILE lab help the consortium to practically **demonstrate the overall platform of the project**.

It will be a **prototype implementation** of UMOBILE, **an overall technological validation** and **a working proof-of-concept**.

We needed a testbed implementing Wi-Fi and Wi-Fi Direct

Let's join other communities

- **Name Data Networking Testbed:** The UMOBILE Lab is a node of the NDN Testbed, that include software routers at several participating institutions, application host nodes, and other devices.

Let's join other communities

- **Future Internet Research and Experimentation Testbed:** The UMOBILE Lab is joining the FIRE Federation (Fed4Fire+)

[FED4FIRE+](#)[OPEN CALLS](#)[RUN YOUR EXPERIMENT](#)[F4F+ FACILITIES](#)[NEWS](#)[FEC & EVENTS](#)[CONTACT](#)

WELCOME TO

FED4FIRE+

THE LARGEST FEDERATION
OF TESTBEDS IN EUROPE

Open the UMOBILE Lab to the scientific community

We are working to **open the UMOBILE lab to the scientific community**, in the next months. Researchers will be able to:

- to perform their own experiments
- to implement and test scenarios with increasing complexity
- to improve the performance of the operational procedures
- to test the limits of the system and of its operational capabilities.

Which kind of experiments can I perform?

LET'S INTRODUCE THE LAB

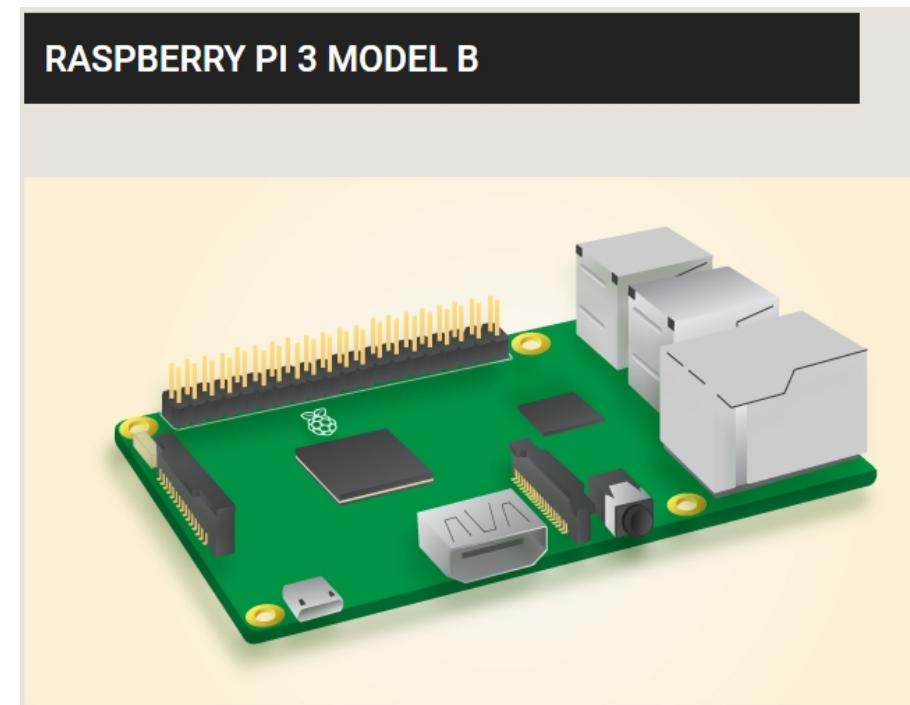

LET'S INTRODUCE THE LAB

- The lab can be remotely accessed by the users through a **VPN connection**
 - Human users and their devices are replaced by **Android and Linux black-boxes**, and **Android smartphones**.
 - Black-boxes will receive commands from a **test robot**. The test robot is connected to each black-box through the **test network**.
-

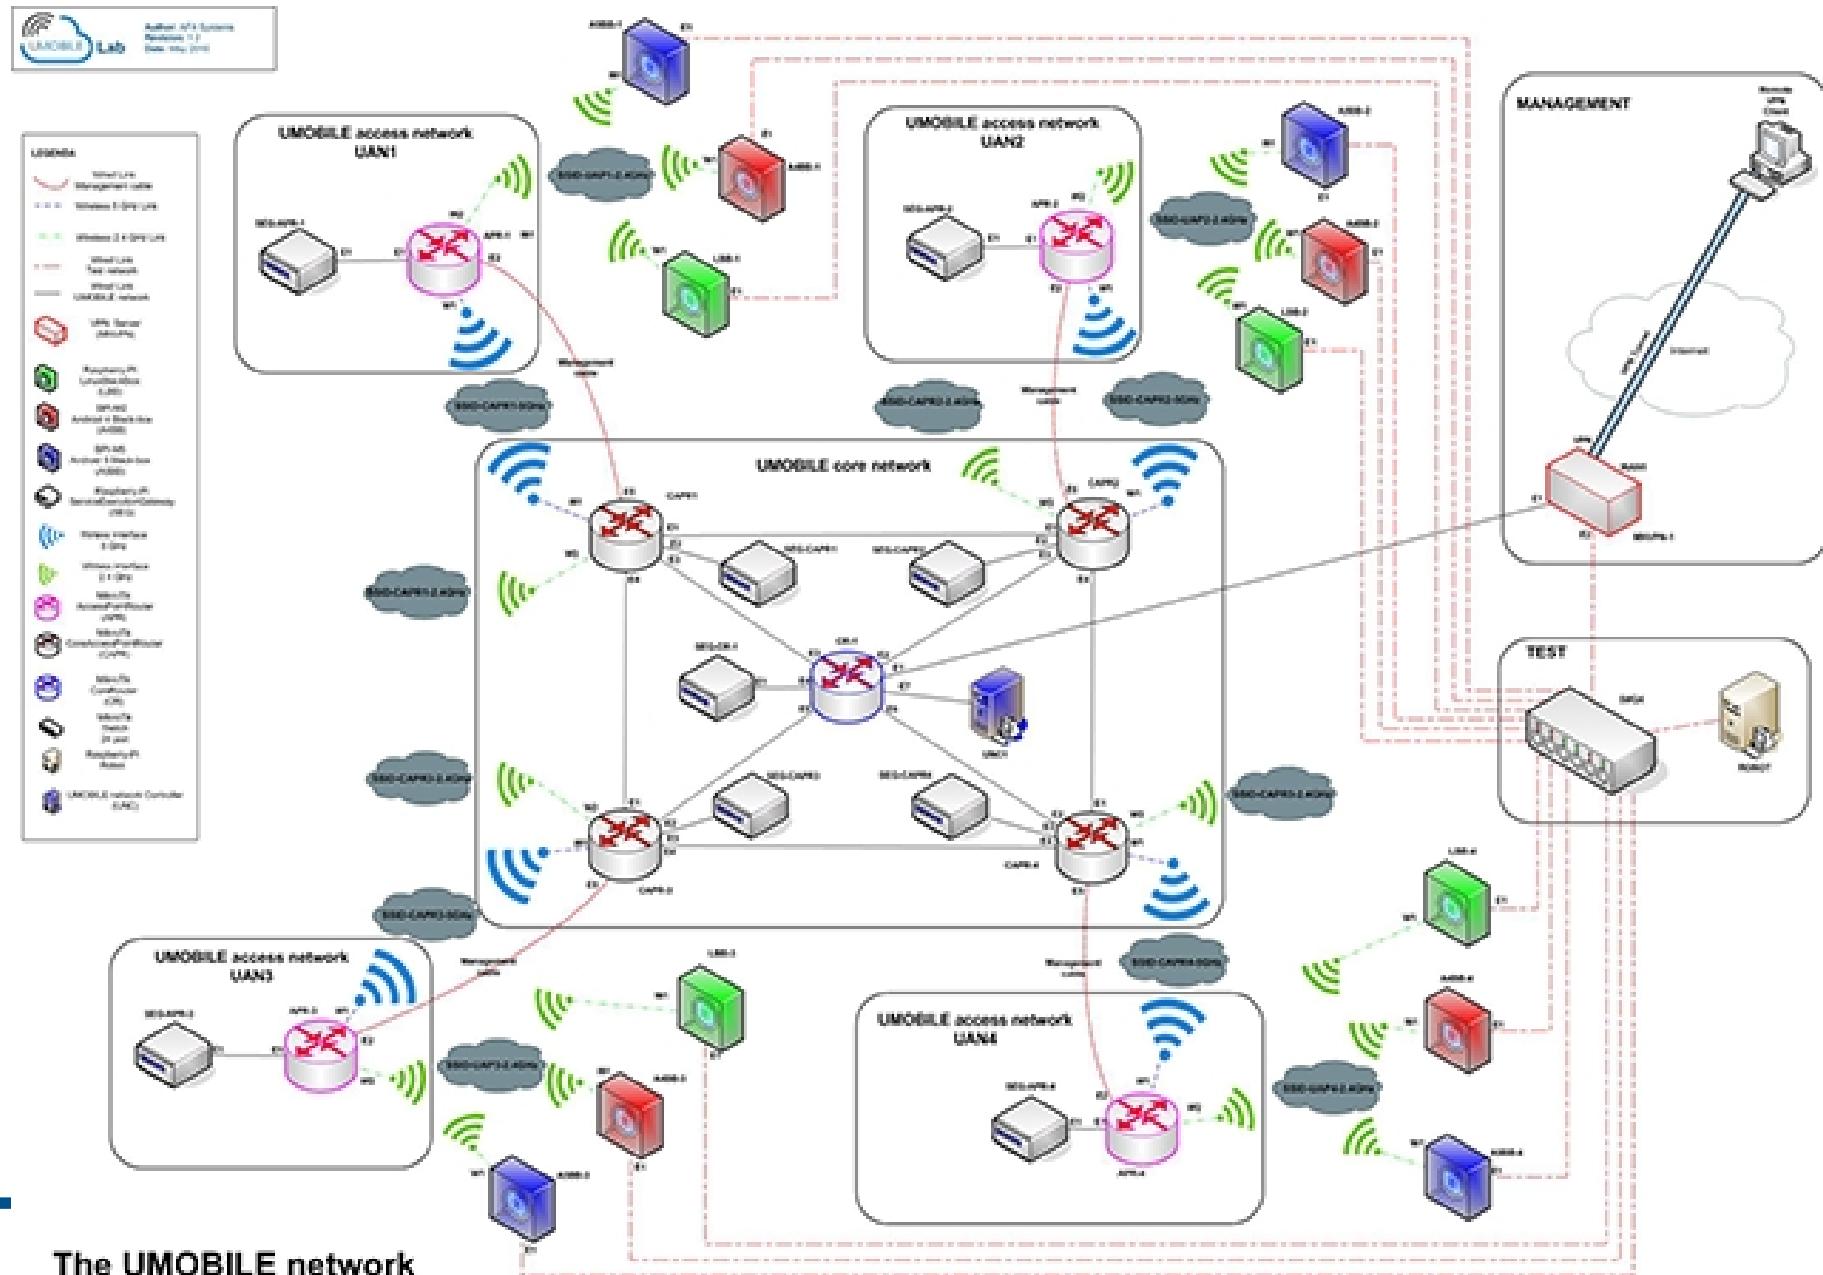

LET'S INTRODUCE THE LAB

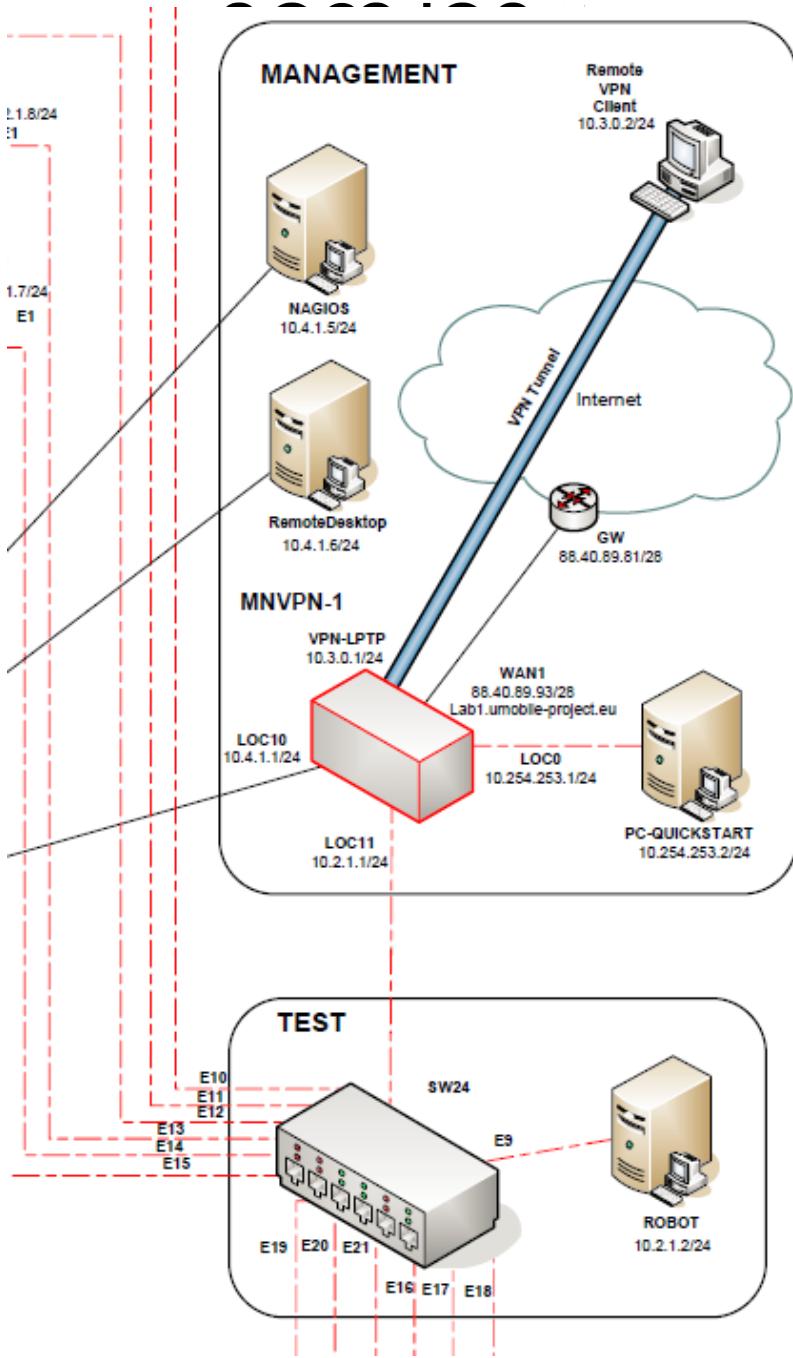

The lab is constituted by the following devices

- **Mikrotik RouterBoard**
 - Wi-Fi access points (2.4Ghz, 5Ghz)
 - Routerboard
- **Linux systems**
 - Raspberry PI III
- **Android systems**
 - Banana PI M3, Android OS 5.1
 - Android smartphones OS 5.1

THE LAB ARCHITECTURE

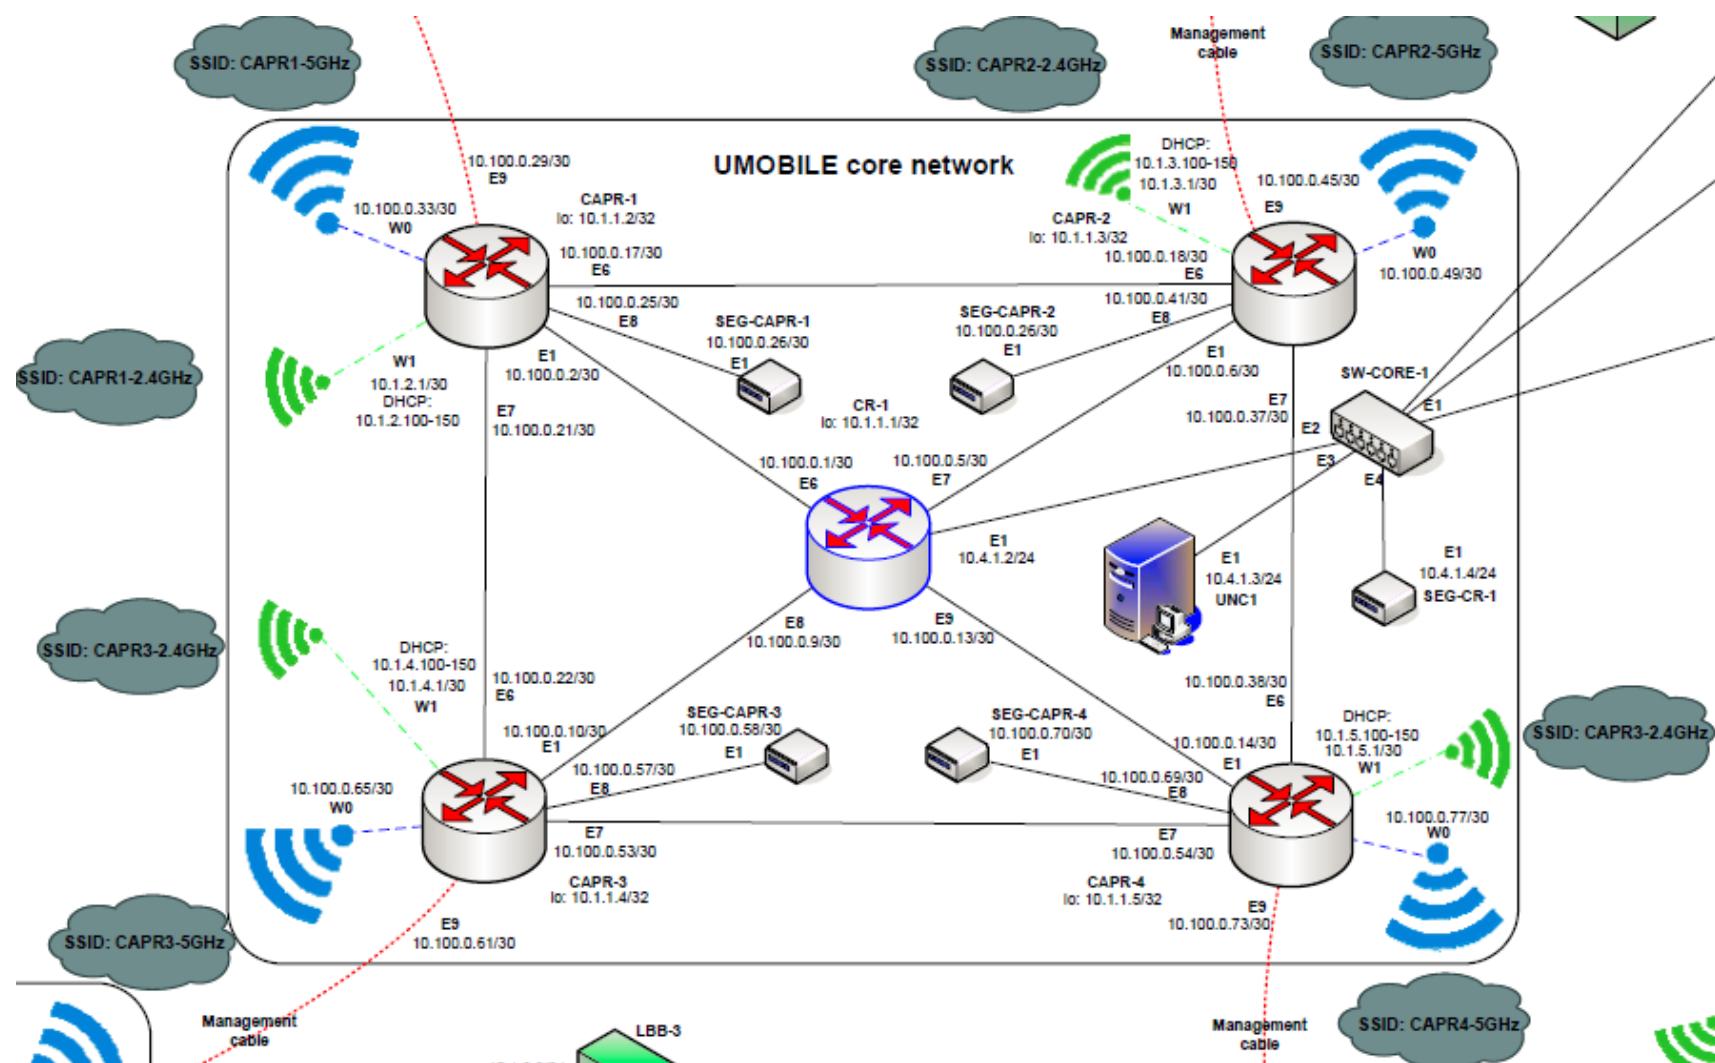

MANAGEMENT NETWORK

NETWORK SUBNET

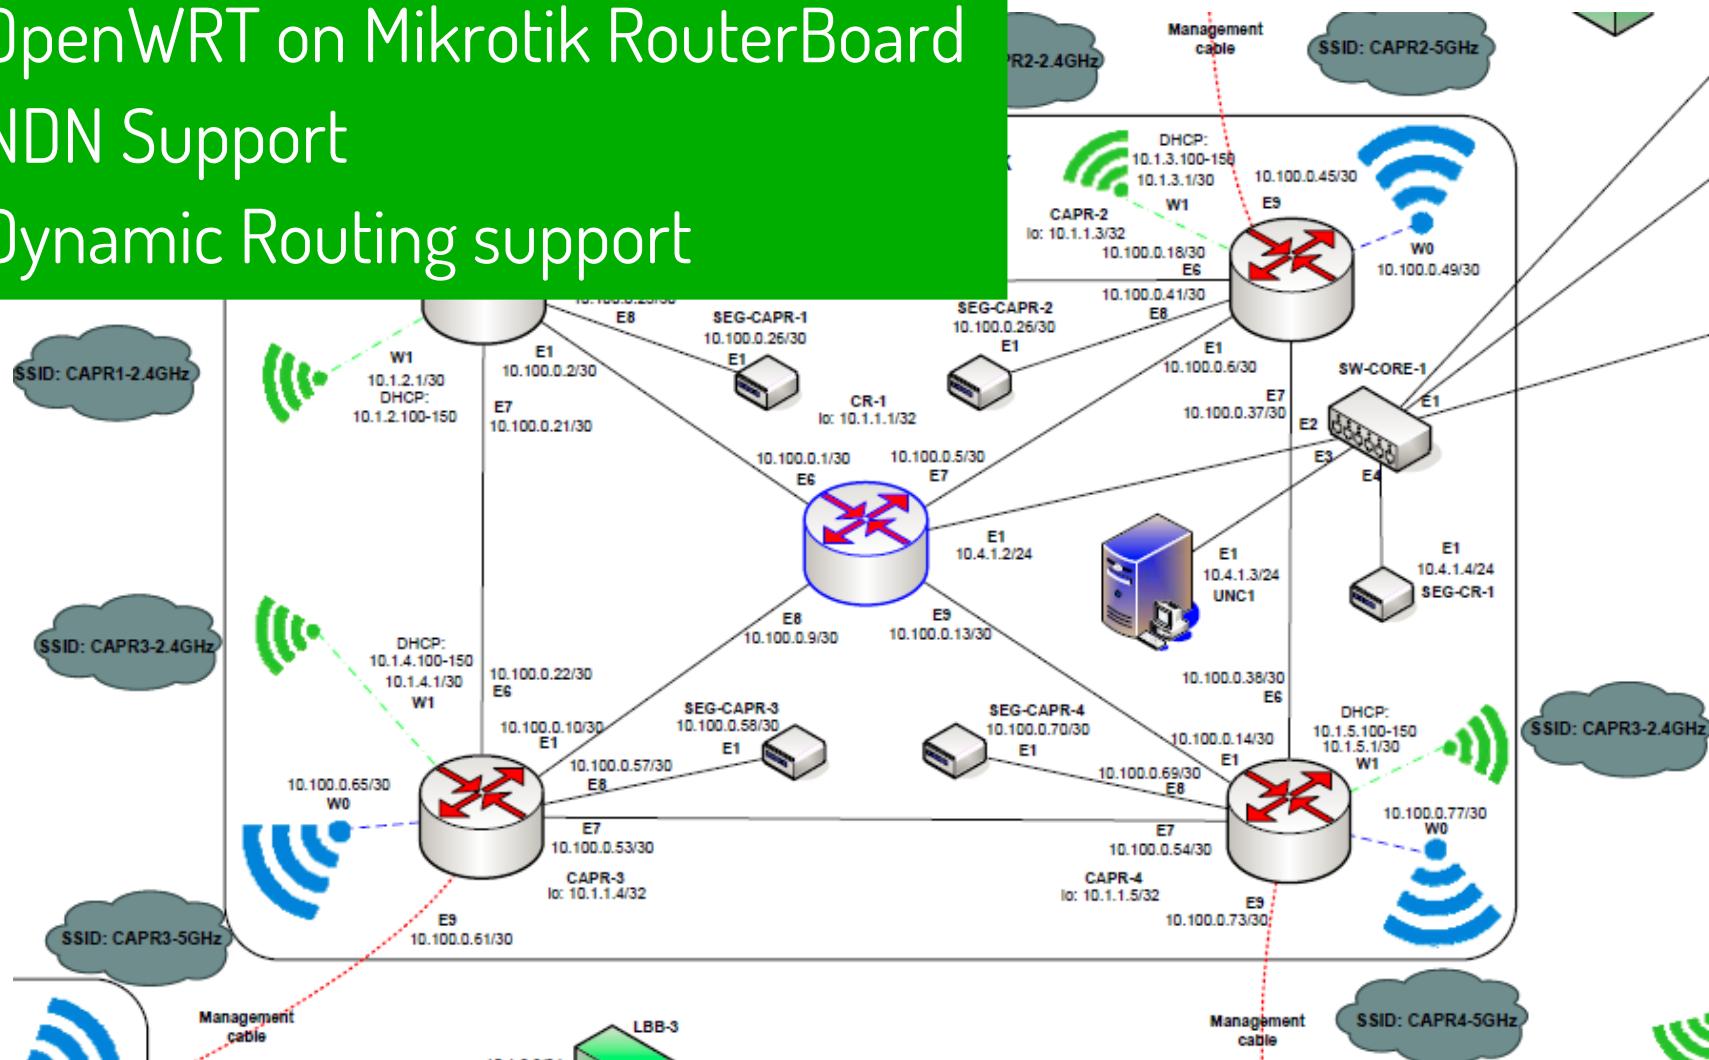

P-t-P: 10.100.0.0/16
 LoopBack: 10.1.1.0/24
 CAPR-1-Wi-Fi-2.4Ghz: 10.1.2.0/24
 CAPR-2-Wi-Fi-2.4Ghz: 10.1.3.0/24
 CAPR-3-Wi-Fi-2.4Ghz: 10.1.4.0/24
 CAPR-4-Wi-Fi-2.4Ghz: 10.1.5.0/24
 UAP-1-Wi-Fi-2.4Ghz: 10.1.6.0/24
 UAP-2-Wi-Fi-2.4Ghz: 10.1.7.0/24
 UAP-3-Wi-Fi-2.4Ghz: 10.1.8.0/24
 UAP-4-Wi-Fi-2.4Ghz: 10.1.9.0/24
 TEST: 10.2.1.0/24
 VPN: 10.3.0.0/24
 CORE-LAN: 10.4.1.0/24
 QUICKSTART: 10.254.253.0/24
 MANAGEMENT: 10.254.254.0/24

The management network allows users to reach any device in the testbed, through an IPV4 **VPN** over the Internet (L2TP or OpenVPN).

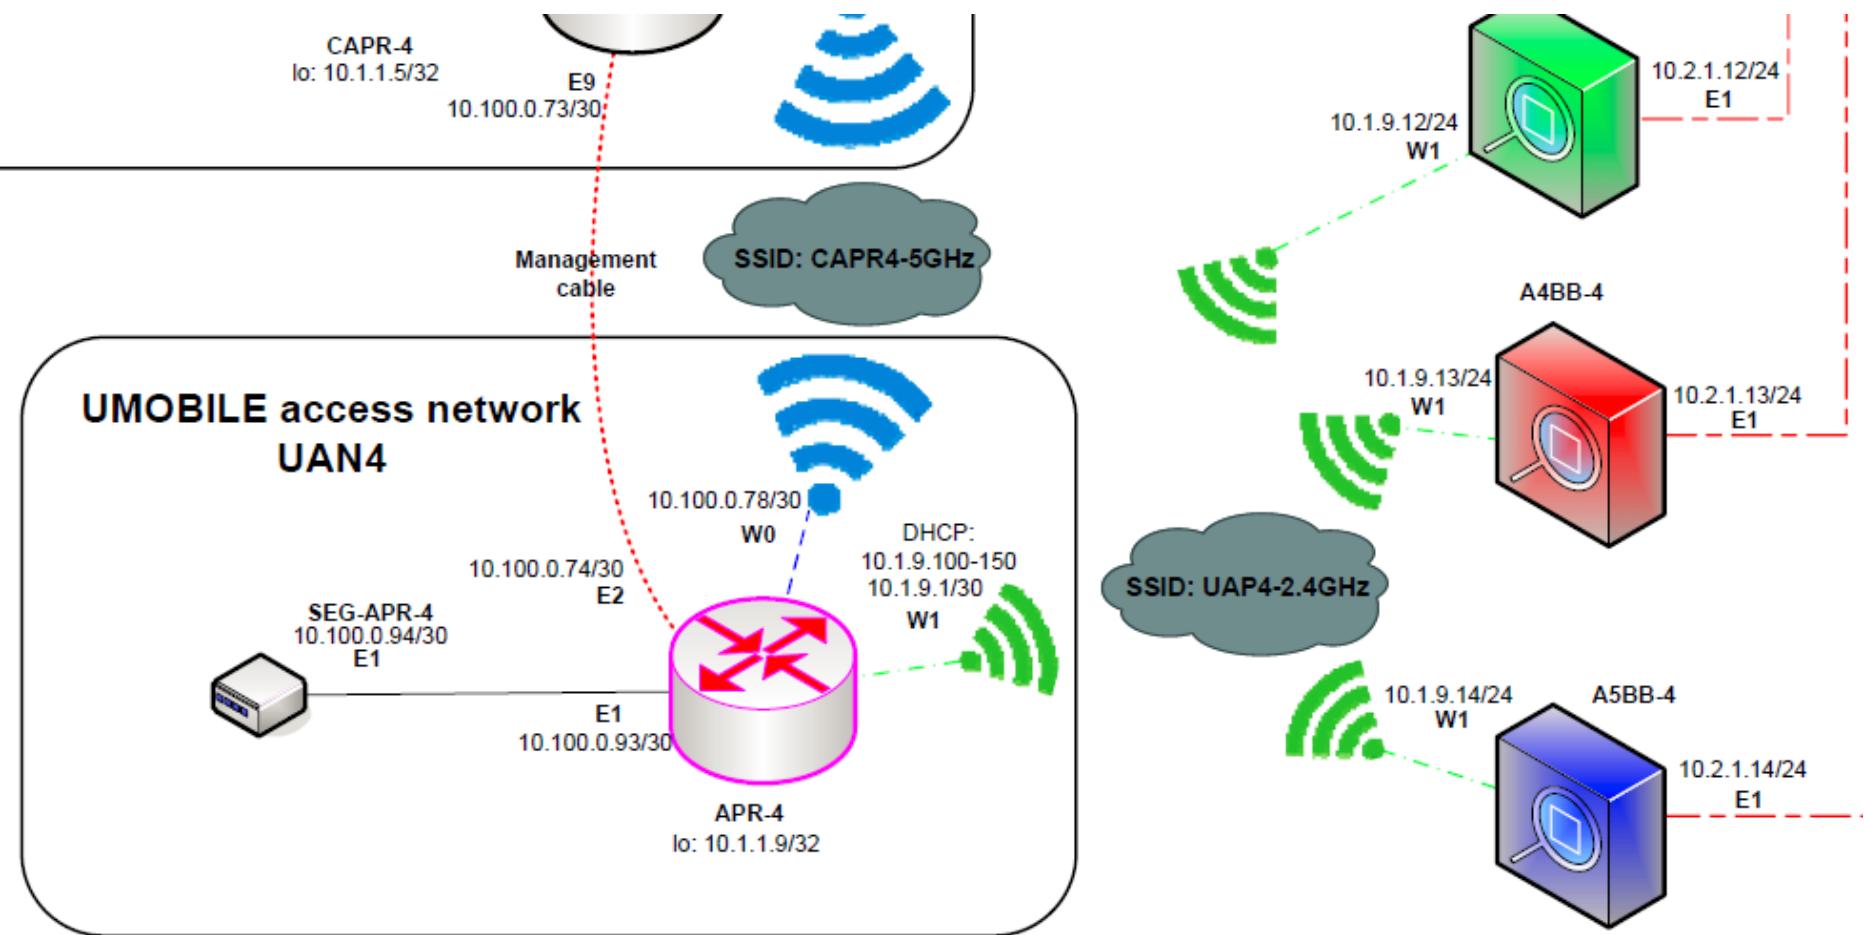

CORE NETWORK

OpenWRT on Mikrotik RouterBoard
NDN Support
Dynamic Routing support

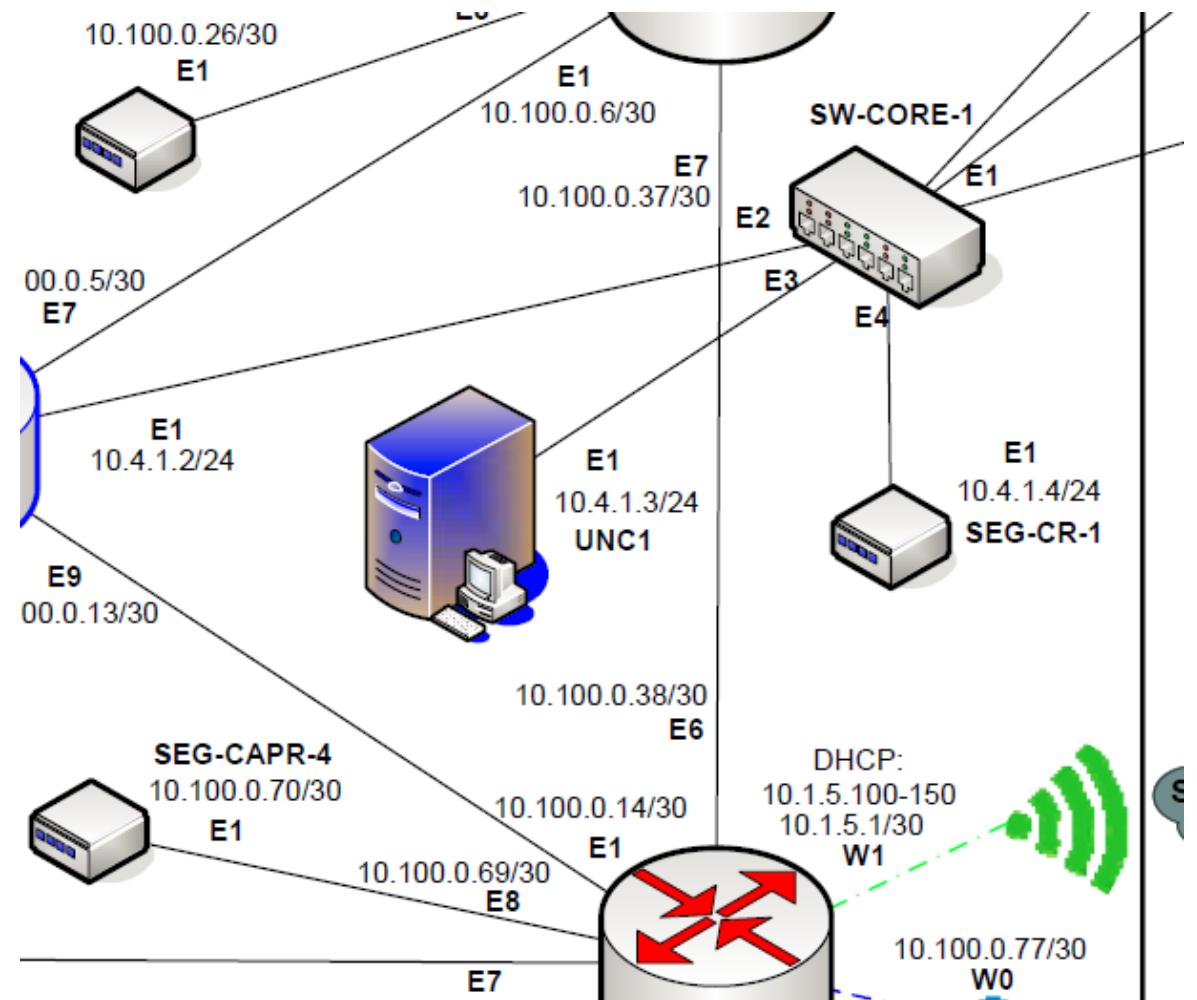

ACCESS NETWORK

SERVICE MIGRATION DIRECTOR

- SERVICE MANAGER
 - It manages the migration of services and applications in the network

Now we are able to reply to the following question

Yes, but...

- It's the first EU **NDN testbed with end-user devices**
- You will be able to access over the NDN global tested a significant set of NDN-enabled mobile devices (smartphones, raspberry Pi, ...).
- You can test NDN capacity to collect large amounts of sensing data
- You can test NDN capability to set up voice communications
- Etc...
- You will be able to simulate mobility (by bringing up and down wireless interfaces)

How to join UMOBILE?

How can I access and use the LAB?

Sorry,
it's still working
in progress

It will be opened to the
scientific community by
the end of january 2018

The Named Data Networking (NDN) project (<https://named-data.net/project/>) aims to develop a new Internet architecture that can capitalize on strengths — and address weaknesses — of the Internet's current host-based, point-to-point communication architecture in order to naturally accommodate emerging patterns of communication. The NDN research testbed is a shared resource created for research purposes, that include software routers at several participating institutions, application host nodes, and other devices.

UMOBILE Lab, located at AFA Systems (www.afasystems.it), is part of the Named Data Networking (NDN) project.

Policies for Accessing the UMOBILE Lab

To access the UMOBILE Lab, please read these policies first, then contact umobilelab@afasystems.it.

In order to ensure proper usage of the UMOBILE Lab, please agree with the policies outlined below.

1. ...
2. ...
3. ...

If the above policies cannot be met, we encourage you to contact us to discuss access to the testbed. For more information and to access the Lab, please, contact ndtestbed@arl.wustl.edu.

Francesco Amorosa,

ACCESSING THE LAB

You are accessing the Internet
through the VPN tunnel.
Please Login.

LOGIN

- Once logged into UMOBILE Lab, it is possible to access: each device in the lab, UMOBILE website and UMOBILE project-wiki, the Internet (through a captive portal)
